

Students, while visiting Google, will present upon returning to class, one interesting (cool) thing they see at Google. Each student will be expected to take a photo of one thing they find interesting and in a Google slide sent to them by me, they need to briefly explain "The Cool Thing" and show the photo. During the first class following the field trip, students will be given 20 minutes to develop their slides and then they will present their slides to the class.

"One Cool Thing" - Google Car!

I really learned a lot about the Driverless Car Technology while at Google. Google has had a fleet of driverless cars on the Bay Area roads for a number of years now. They expect to begin selling driverless cars to the public within the next three years. I learned that the success of these cars can be attributed to Machine Learning, in which the cars computers are analyzing a vast amount of Data so that they can safely respond to precarious situations.
